

CPSC 304 Project Cover Page

Milestone #: ____4____

Date: _2023/12/01_

Group Number: ____64____

Name	Student Number	CS Alias (Userid)	Preferred E-mail Address
Ivy Li	80002512	o4g4f	lixinyu0209@gmail.com
Isabella Han	55022974	h2j2s	hanxy030703@gmail.com
Carol Ma	17849571	o1w4p	carol_ma21@163.com

By typing our names and student numbers in the above table, we certify that the work in the attached assignment was performed solely by those whose names and student IDs are included above. (In the case of Project Milestone 0, the main purpose of this page is for you to let us know your e-mail address, and then let us assign you to a TA for your project supervisor.)

In addition, we indicate that we are fully aware of the rules and consequences of plagiarism, as set forth by the Department of Computer Science and the University of British Columbia

A short description of the final project, and what it accomplished:

Short description:

This application is a job portal designed to connect recruiters and job seekers in Canada, streamlining the job-seeking and hiring processes. It utilizes a comprehensive database to manage user profiles, job applications, job posts, scheduled interviews, and career fair participation, facilitating recruitment and efficient information exchange between job seekers and companies.

What it accomplished:

We defined two distinct user roles (Job seekers and Recruiters), each role will have specific permissions to distinct web pages with different functionalities.

They can both sign up with their username, password, name, email, phone number and description, and recruiters can also register with their company's name. They can login later with their username and password.

For Job seekers Specifically:

- View details of all jobs posted and apply directly for positions by submitting their resume and cover letter.
- Create incomplete application packages containing resumes and cover letters and decide whether to submit an application for a specific position later.
- Find the average salary by the job title.
- Find the average salary for each company that have more than one job posted.
- Find the company with recruiters posting jobs exceeding the overall average salary of all job posts.

For Recruiters Specifically:

- View all the applications and applicants' information for the job post they posted and update status of those applications.
- Schedule (create/edit/delete) an interview for a specific application.
- Create new job posts.
- Find all jobseekers who have applied for all jobs posted by them.

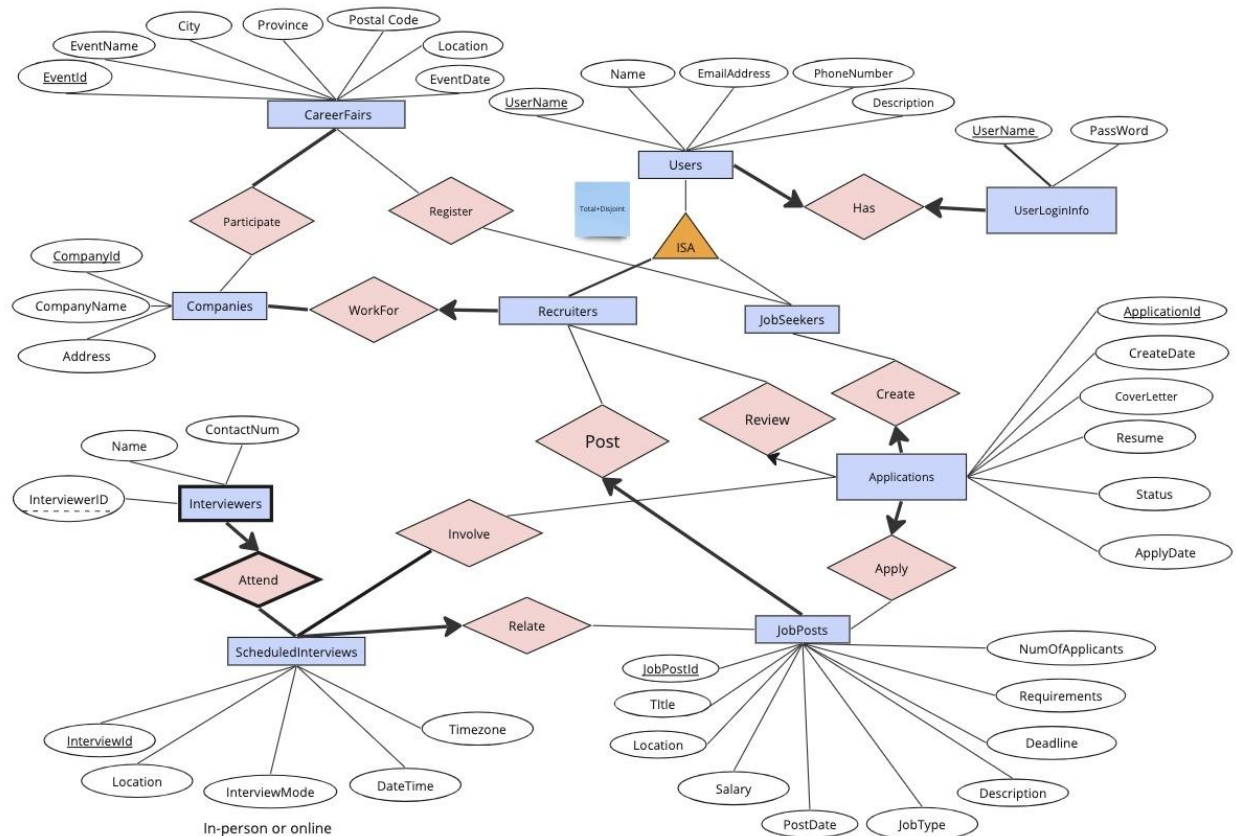

Furthermore, there are some extra features on the main page ("Admin Page"):

- View all relations in the database by selecting a specific table and the attributes to be viewed.
- Find all users by username, phone number and/or email.

- Count the total number of users, recruiters, job seekers and companies.

Updates:

1. Updated ER Diagram:

2. Updated Schema:

- Users** (UserName: varchar, Name: varchar, EmailAddress: varchar, PhoneNumber: varchar, Description: varchar)
- Recruiters** (UserName: varchar, **CompanyId**: integer)
- JobSeekers** (UserName: varchar)
- UserLogInfo** (UserName: varchar, PassWord: varchar)
- Companies** (CompanyId: integer, CompanyName: varchar, Address: varchar)
- JobPosts** (JobPostId: integer, **RecruiterId**: varchar, Title: varchar, Location: varchar, Salary: integer, PostDate: DATE, JobType: varchar, Description: varchar, Deadline: DATE, Requirements: varchar, NumOfApplications: integer)
- Applications** (ApplicationId: integer, **RecruiterId**: varchar, **JobPostId**: integer, CreateDate: DATE, CoverLetter: varchar, **Resume**: varchar, Status: varchar, ApplyDate: DATE)
- Resumes** (Resume: varchar, **JobSeekerId**: varchar)

- i. ScheduledInterviews (interviewId: integer, **JobPostId**: integer, Location: varchar, InterviewMode: char[10], DateTime: DATE, Timezone: varchar)
- j. Applications_ScheduledInterviews (InterviewId: integer, **ApplicationId**: integer)
- k. Interviewers_Attend (InterviewerId: integer, InterviewId: integer, Name: varchar, ContactNum: varchar)
- l. CareerFairs (EventId: integer, EventName: varchar, **PostalCode**: varchar, Location: varchar, EventDate: DATE)
- m. LocationDetails (PostalCode: varchar, City: varchar, Province: varchar)
- n. Companies_CareerFairs (**CompanyId**: integer, EventId: integer)
- o. JobSeekers_CareerFairs (JobSeekerId: varchar, EventId: integer)

Reason: We realized that Username could be used as a primary and foreign key for Users, Recruiters, and JobSeekers, so we removed the redundant UserId.

Schema and Screenshots of What Data is Present after Reset
